## API Documentation

- ACC : <https://portal-acpt.api.ehealth.fgov.be/>
- PROD : <https://portal.api.ehealth.fgov.be/>

# 2. Updated features

## 2.1. lastHighRiskCohabitationContactDate

When somebody can't apply the quarantine measures due to cohabitation, the quarantine period is extended and so the validity period is shifted.

When creating a CTPC code, when the lastHighRiskCohabitationContactDate is filled, the validity period is:

- Start: lastHighRiskCohabitationContactDate + 17 days
- End: lastHighRiskCohabitationContactDate + 24 days

lastHighRiskContactDate and lastHighRiskCohabitationContactDate can't be used at the same time. It's either one or the other, or neither.

lastHighRiskCohabitationContactDate can be used only by the contact center.

## 3. New feature

### 3.1. API : Test result consultation

A new method is now available: `.../prescriptionCodes/{{code}}/testResult`

This method allows to retrieve the test result for a particular CTPC code.

As this is a new feature, there is no one-to-one match for all results. If there is no one-to-one match between a result and a CTPC code, the method returns the most recent result for the person providing the result date is after the prescription date.
