2. Updated features

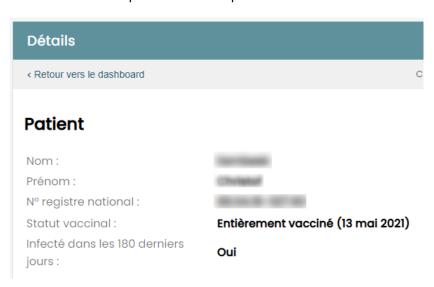

2.1. New patient information: vaccination status & infection in the last 180 days

The vaccination status of a patient is now shown in the detail view.

It shows:

- Patient is not vaccinated
- Patient is partially vaccinated + date of last injection received
- Patient is fully vaccinated + date of last injection received

The details view now also shows if the patient has been positive to COVID-19 in the last 180 days.

2.2. High risk contact prescription: test recommendation

When creating a prescription for reason high risk contact, the application now:

- shows the vaccination status of the patient (doctors only, it is not shown to citizen)
- shows whether the patient has been infected in the last 180 days or not (doctors only, it is not shown to citizen)
- recommends the appropriate types/number of tests to create for the patient
 - the system analyzes the covid situation of the patient (vaccination status, infection in the last 180 days, last high risk contact date) in order to recommend the tests to create
- lets the doctor have the final say for the tests to create (doctors only, it is not shown to citizen)

2.3. Search: free test is mentioned even for cleaned codes

The prescription codes must be cleaned after 60 days due to legal reasons.

This clean removed the possibility to check whether the prescription code was a free test requested by the citizen or not.

It is now again possible to verify if a code is a free test requested by the citizen even after the cleaning of the prescription code.
